Amendments to the Specification:

Please replace paragraph [0005] with the following amended paragraph:

[0005] This object of the invention is achieved by providing a sealing system for an internal-combustion, in which a lubricating oil catching space is separated by wall elements from adjoining space sections, which wall elements have elastic sealing elements for sealing off the spaces, wherein a sealing element is provided for compensation of sealing gap tolerances which has at least two sealing arms which in use abuttingly engage a space wall to be sealed off.
